If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 (571)-272-4200.

### **DETAILED ACTION**

#### Information Disclosure Statement

1. In the information disclosure statement filed 11/30/2007 the contents of the International Search Report and European Office Action have been considered though the source documents themselves, as listed by the applicant on the IDS of 01/16/2009, have been lines through.

### Allowable Subject Matter

- 2. Claims 15-17, 24, 36, 39-43 and 48-57 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:

GB 881813 to Societe D'Electro Chemie discloses a method for the hydration of CaO particulates in a gaseous medium that contains water vapor but is not saturated therewith. The hydration takes place at a temperature of 120-125°C and a pressure of 60-100 mm of Hg (0.08-0.13 atm). The partial pressure of the water vapor therefore must be less than 0.13 atm, as that is the maximum pressure employed in the hydration process and the gaseous medium can not be saturated with H<sub>2</sub>O. The prior art fails to anticipate the instant claims as the required temperature and water vapor partial pressures are not present in the process. One of ordinary skill in the art at the time of the invention would not be motivated to modify the process to employ higher temperatures or water vapor partial pressures in the required range, as increasing the temperature or water vapor partial pressure results in a hydroxide formation rate that results in the disintegration of crystal structure of the starting oxides.

US 3106453 to Corson discloses a process for hydrating lime in the presence of steam. The process preferably takes place at a temperature of 250-800°F, with water vapor as the primary gaseous reactant. The lowest water vapor pressure disclosed by Corson is 90 psi (6.12 atm), far exceeding the maximum water vapor partial pressure allowed by the instant claims. As a result Corson fails to anticipate or render obvious the instant claims. There is no motivation for one of ordinary skill in the art at the time of the invention to modify the process disclosed by Corson to employ a water vapor pressure in the required range, as the developed pressure is a direct result of the amount of water employed as a reactant in the Corson and the effectiveness of the hydration process could not be maintained if the amount of hydrating reactant was reduced.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KEVIN M. JOHNSON whose telephone number is (571)270-3584. The examiner can normally be reached on Monday-Friday 7:30 AM to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on 571-272-1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
